

RAKRIMLESS™ technology

The ultimate in hygiene for your home

RAKRIMLESS™ delivers the ultimate level of hygiene control in your bathroom, matching the standards which until now would only have been present within specialist healthcare settings.

New technology is not something we normally associate with the smallest room in the house but at RAK Ceramics we strive to constantly develop advanced water technologies in order to deliver the very best possible performance and function in the bathroom.

RAKRIMLESS™ OFFERS

HYGIENE

No hidden rim to harbour germs. You can clean easily and effectively the whole surface of the toilet giving you a more HYGIENIC result.

WATER EFFICIENCY

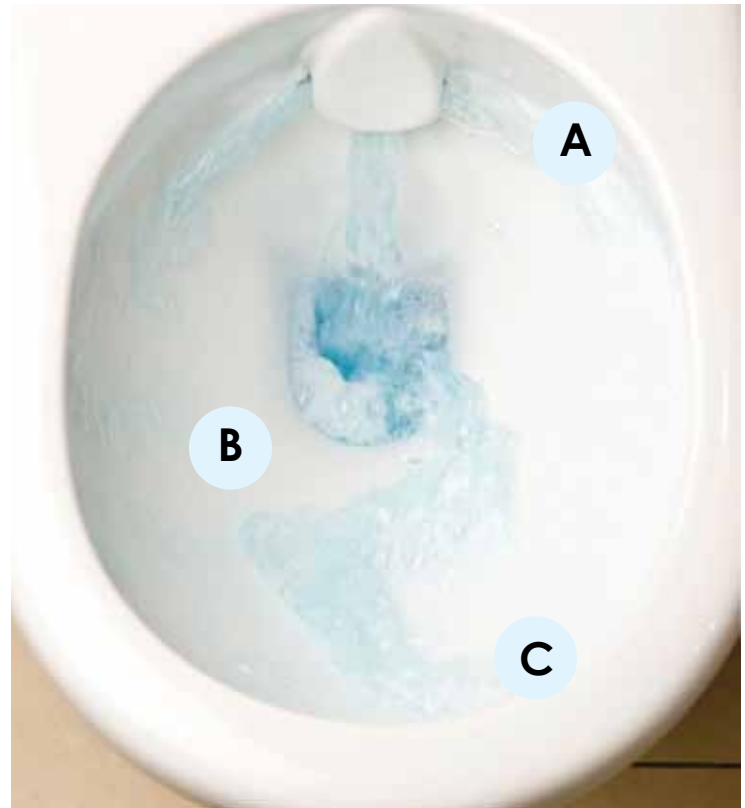

Our side lever cistern uses only 4 litres for the main flush and 2.5 litres on the small flush saving a whopping third off on water usage.

EASY CLEANING

The contoured shape is very easy to clean, no more need for expensive specialised products to shoot under the rim!

COMFORT HEIGHT

Extra 50mm on the height of the pan makes it easier for those who need less distance to rise and lower themselves.

- A** No ledges or rim ensures water is fully projected round to the front of the bowl.
- B** Water drops down into the pan to cover the entire surface making it fully compliant with the Water Regulations Approved Scheme (WRAS).
- C** Water reaches every part of the bowl below the distributor outlets to ensure it is completely clean.
